

## APP & WEB

### **PARKINGHQ® APP & WEB - Parking just a mouse click or a finger tap away**

Bring every parking lot to your Smartphone App and any Internet Website. Thanks to iLogs, your static car park information (CI, logos, pictures, key-visuals, available services, opening hours, tariffs/rates) is instantly available online. Furthermore, Smartphone and Internet users get dynamic information like occupancy-levels of all your car parks. Link to eCommerce modules like PreBooking, Mobile Ticket Payment or Customer Portal available and you don't need to maintain App and Web data separately. All your content details are configured once and appear simultaneously in your App and on your Web. If you already have a Smartphone App up and running, content can be integrated.

# MAIN FEATURES

Native Smartphone Apps  
(iOS and Android)

Car Finder

App Store Management included

Push Messaging
